Conversion PoC for ICICI Prudential AMC

What the analytics says, what investors and peers do, and the tests we propose to start

NVECTA data 14 Sep - 13 Oct 2026 | Draft for discussion | 14 Oct 2026

Most of the conversion gap sits on mobile web and campaign pages

6.5%

of 1.0M web users logged in within 30 days (64,958 of 1,001,828)

2.4%

mobile-web login rate against 16.6% on desktop; mobile is 72% of users

0.21%

of 267,740 users on the Contra NFO page reached login; 96% mobile, 80% from Google paid search

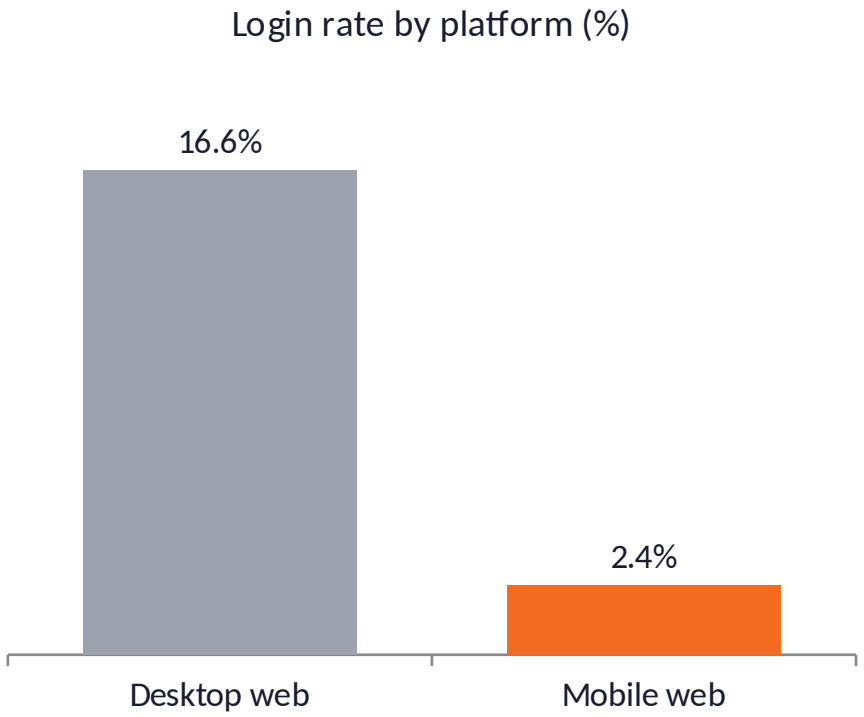

70-77%

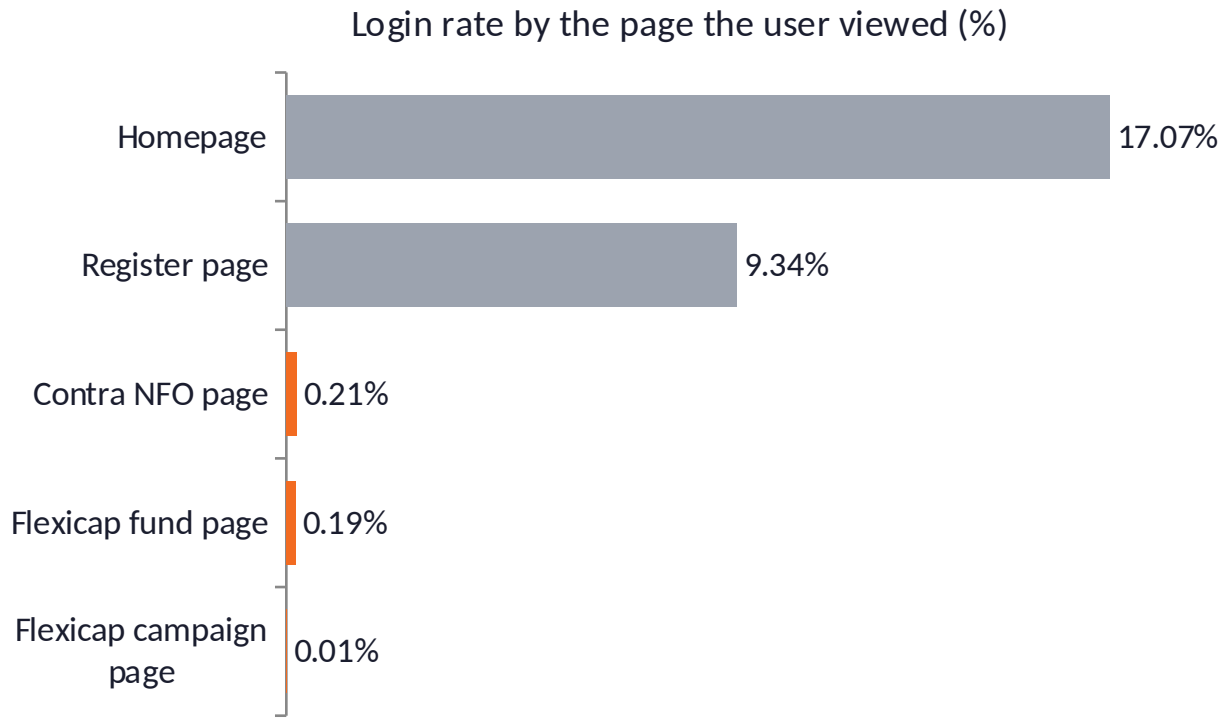

payment-to-success in every saved funnel; UPI is 74% of 5,053 failure events

So what: start the PoC on the pages that carry the audience (NFO and fund pages, homepage) and add personalisation after login; sign-in and payment fixes go to the ICICI Pru engineering backlog.

Source: NVECTA, ICICI Pru AMC account, 14 Sep - 13 Oct 2026; payment-to-success from saved funnels 3041, 2823, 3203, 3202 (stored ranges).

Login rate collapses on mobile web and on campaign and fund pages

About 465,000 users land on the Contra NFO, Flexicap fund and Flexicap campaign pages in 30 days, and 828 of them reach login. These are the pages paid media sends traffic to.

Source: NVECTA funnel 3563 (page_view to Login), 14 Sep - 13 Oct 2026; users who viewed the page and later fired Login. Platform base: 713,921 mobile-web and 287,907 desktop users.

Five pages carry the story; the PoC starts with three

Page	What the data shows	Role
NFO and fund landing pages	465k users, 0.2% reach login, 96% on mobile; 88% bounce on the NFO page (saved report)	**In PoC: T1 to T3**
Homepage	182k users, 17% reach login, about 60% bounce (saved report); one page for every visitor	**In PoC: T4**
Post-login Our Funds and dashboard	Fund Details to investment details 37%; 27,791 lumpsum vs 5,670 SIP users; segments already built	**In PoC: T5, T6**
Sign-in and Register	9.3% login on the register page, 41% sign-up completion, 26.6k users on credential recovery	Next phase: needs ICICI engineering
Transaction and payment	23-30% lost between payment and success; UPI is 74% of failures	Next phase: no page access today

Source: NVECTA, 14 Sep - 13 Oct 2026; bounce rates from saved Landing Page and Mutual Fund Pages reports (stored ranges). Sign-up and folio funnels: saved ranges.

Investors want a simple, safe start; NFOs must earn attention

6.7%

of households invest in mutual funds, though 53% are aware

74%

of non-investors cite complexity and knowledge gaps

73%

cite fear of losing money

51%

cite trust and transparency

What they want to see

A clear way to start: SIP-first, small amounts. SIPs hit a record Rs 32,490 crore in Sep 2026

Plain-language risk: downside and who the fund is for, not just returns

Proof and pedigree: track record, fund house, how an NFO differs from funds they hold

Easy digital onboarding: no repeat KYC, UPI that works (Rs 5 lakh limit, uneven bank rollout)

Mobile-first: smaller cities added 389 lakh new SIP registrations vs 267 lakh in top-30 cities (FY26)

NFOs: collections fell 35% in Jan-Jun 2026 and investors are selective, so an NFO page must show why this fund and how it differs.

Sources: SEBI Investor Survey 2025 (Outlook Money, Finnovate); AMFI Sep 2026 (Angel One); Cafemutual; Upstox. From search summaries, verify before client release.

Front page and fund pages: where ICICI Pru stands against peers

Parameter	ICICI Pru today (from data)	AMC peers	Apps	What to borrow
Primary CTA on mobile	**Weak** 0.21% login, 88% bounce on NFO page	**Partial**	**Strong**	Sticky CTA with SIP / one-time toggle
Lead capture without full sign-up	**Weak** Register wall; no notify-me	**Partial**	**Strong**	WhatsApp or push opt-in, no password
NFO presentation	**Partial** NFO list has only 2.6k users	**Partial**	**Partial**	Closing date, minimum, how it differs
Trust and proof on page	**To verify** Not measured on page	**Partial**	**Strong**	Riskometer, benchmark returns, pedigree
Decision aids	**Partial** Calculators are separate pages	**Partial**	**Strong**	Inline calculator beside the CTA
Personalisation	**Weak** None before login; app deeplinks exist	**Weak**	**Strong**	Source, cohort and new vs returning
Mobile experience	**Weak** 2.4% login vs 16.6% desktop	**Partial**	**Strong**	Short single-column mobile pages
Help and guidance	**Strong** Voice and text assistant, AI overview	**Partial**	**Partial**	Surface the assistant on NFO pages

AMC peers: SBI MF, HDFC MF, Axis MF, Nippon India MF. Apps: Groww, Zerodha Coin, ET Money. Peer ratings are an analyst view, to be validated live in Week 0.

Six tests to start, all deliverable without new integrations

#	Page	Test (variant vs control)	Why we expect a lift
T1	**NFO and fund pages**	Sticky mobile CTA bar with amount chips and a SIP / one-time toggle, into the existing flow	267,740 users, 96% mobile, 0.21% reach login; no persistent action on a long page
T2	**NFO page, paid traffic**	Source-matched hero and proof strip: Google search intent vs Meta video; riskometer, why this fund	80% of traffic is Google search, 15% Meta; one generic page for all
T3	**NFO and fund pages**	Exit-intent or scroll Notify me overlay (WhatsApp or web push, via NVECTA) plus 3-day retarget	88% leave with no way to be reached; converters take 2.9 days to log in
T4	**Homepage**	Segment-aware hero: new vs returning vs source; NFO or SIP-first for new, resume for returning	182k users, 17% reach login; same page for everyone
T5	**Post-login: Our Funds**	Age and risk cohort ordering vs the trending list, using existing segments	Fund Details to investment details is 37%; cohort segments exist
T6	**Post-login: dashboard**	Next-best-action card by lifecycle: lumpsum to SIP, SIP top-up, debt to equity, ELSS gap	27,791 lumpsum vs 5,670 SIP users; segments exist; 10% holdout

T3, T4, T5 and T6 variants and the T1 CTA link need confirmation of which surfaces and tool serve variants (Week 0).

Every test has a baseline, a sample size and guardrails

#	Primary metric (baseline) and lift sized	Users per arm	Run time	Guardrails
T1	Page view to login or lead (0.21% login); +50% relative	about 37,000	2 weeks (8,900 users a day)	Bounce, transactions
T2	Engaged-session rate (bounce 87.8%, saved report); -3 points bounce	about 2,100	2 weeks	Login rate
T3	Opt-ins per 1,000 visitors (new metric, target 10); purchases vs 10% holdout	about 62,000 visitors a week	2 weeks plus 2-week retarget read	Bounce, opt-out rate
T4	Homepage to login (17.07%); +8% relative	about 12,400	2 weeks (6,100 users a day)	Bounce, transaction rate
T5	Fund list to investment details (37-40%); +3 points	about 4,200	3 weeks (about 1,000 app users a day)	Fund Details views, purchases
T6	SIP share of purchases (about 17%); +3 points; card CTR baselined in Week 0	about 2,600	4 weeks	Average ticket, total purchases

Two-sided test, 5% significance, 80% power; baselines from NVECTA 30-day window unless noted. Minimum two full weeks to cover weekday cycles.

Personalisation after login and an NFO programme extend the tests

Cohort-led fund discovery (T5, T6)

Cohort (existing segment)	Lead with, instead of a generic trending list
Age 0-35	SIP-first starters with Rs 500 chips: index, flexicap, multi-asset
Age 35-50	Goal-led hybrid and balanced funds; ELSS prompt where none held
Age 50+	Capital preservation first: hybrid, short-duration debt, SWP ideas
HNI	Lumpsum ideas and new NFOs, with overlap against holdings
Lumpsum-only or SIP-only	Start a SIP; or top up and add a lumpsum
Debt-only investors	Equity entry via hybrid or large-cap, with risk framing

NFO programme

Remind me: capture mobile numbers on the NFO page without a password

Warm-up: push and WhatsApp before open to affinity segments

Returning visitors: closing-date strip and retarget inside 3 days

Rescue: nudge users who stopped or failed to pay

Measure: a 10% holdout and a goal on every journey

Illustrative modules: fund lists are set by ICICI Pru product and compliance. No NFO campaign ran in the last 60 days; the NFO Midweek journey is stopped with no goal.

Eight weeks to a read-out, engineering fixes queued behind it

Week 0
Tracking and baselines

Weeks 1-3
NFO and fund pages: T1, T2, T3

Weeks 3-6
Homepage and Our Funds: T4, T5

Weeks 5-8
Dashboard T6, NFO programme, read-out

Parked for ICICI Pru engineering

OTP or Google-first sign-in (mobile-web login 2.4%)

Progressive onboarding (41% sign-up completion)

UPI recovery and limit guidance (74% of failures)

Transaction-page tests (23-30% lost after payment)

What we need from ICICI Pru

Surfaces: which pages we can change, and the tool that serves variants

Tracking: CTA and notify-me events, goals on every journey, campaign ID kept

Designs: Axis MF and HDFC MF files as starting variants

Media: plan and spend, for cost per lead

Compliance: a review path for variants

Durations are proposals to confirm with ICICI Pru teams.
