Growing SIPs on the web: findings and test recommendations

Motilal Oswal AMC | October 2026

Summary: high SIP intent before login, too little of it converts

2.7%

of SIP-calculator visitors (267k) reach any login page

24% vs 11%

of purchase starters choose SIP: website vs apps

40-60%

of app autopay mandates fail, against about 24% on web

What we found

- Traffic is paid, mobile and concentrated on the SIP calculator and a few fund pages
- Peers end the calculator with a button on the result and show a SIP amount on fund pages; we do not
- After login, mandates fail and cancels outnumber pauses 5 to 1
- The SIP base is large and small-ticket: 2.8M investors, median SIP Rs 1,001

What we recommend

- Five pre-login tests on the calculator and fund pages, mocked up and ready to build
- Eight personalised nudges, before and after login, most runnable now as NVECTA journeys
- 2-3 tests a week, so SIP is the first problem in an ongoing programme

Source: NVECTA analytics, 14 Sep to 14 Oct 2026; competitor page snapshots, 14 Oct 2026.

Who arrives and where: paid, mobile, a few pages

Traffic

- 2.04M visitors in 30 days; 88% arrive from paid search
- 90% browse on the mobile site; apps hold 66% of purchase starts
- SIP calculator: 350k views, 267,573 users, 99% paid search, 91% mobile
- Eight fund pages draw 130k to 318k views each; the login page 117k
- Only 2.6% of visitors are identified across the site (57% on the invest site)

Engagement

- 33,975 users started a purchase; 5,125 (15%) reached the SIP step
- SIP choice: website 24%, m-site 19%, Android 11%, iOS 10%
- Website: 14.5% of purchase starters reach a Charged event; m-site 8.8%
- 97% of calculator visitors never reach a login page in the same journey
- Step-up calculator gets 28k views, 8% of the SIP calculator's

Source: NVECTA page views by Page Url, Traffic Source and Platform; saved funnels 3137 and 3178; 14 Sep to 14 Oct 2026. Charged may include non-SIP payments.

Engagement by city tier and age: metros and 30+ investors lead

By city tier

Tier	Visitors	Purchase starts	SIP step
Metros and NCR	42%	74%	16.5%
Tier-2 cities	36%	19%	14.0%
Smaller towns	21%	7%	13.7%

By age (known users)

Age	Purchase starts	SIP step	SIP step %
23-29	2,392	346	14.5%
30-39	7,912	1,344	17.0%
40-50	9,177	1,545	16.8%

What it tells us

- Metros are 42% of visitors but 74% of purchase starts. Tier-2 and smaller towns bring 57% of visitors and convert far less, so paid spend there is a candidate for tighter targeting
- The youngest cohort (23-29) chooses SIP least: 14.5% against about 17% for ages 30-50, although SIP is their natural product
- SIP investors concentrate in the Midcap Fund (1.58M of 2.82M, 56%), yet paid landing pages are thematic and index funds: Special Opportunities 318k views, Defence 284k, Midcap 130k
- Gulf and Singapore cities give 5.6% of purchase starts (about 1,900), a ready NRI audience

Source: NVECTA, 14 Sep to 14 Oct 2026. City is IP-based (small-town names are often mobile-carrier gateways); the top 100 cities cover 59% of visitors, so tier-2 and smaller-town purchase starts are understated. Age covers known users in the three age segments. Midcap Fund = scheme code FM.

Pre-login journey: where visitors drop and where we test

Arrive

2.04M

visitors; 88% from paid search, 90% on mobile

Land

267k + 1.46M

users on the SIP calculator and on fund pages

★ T2, T5 fund first screen

★ T4 calculator inputs

Build a plan

97% leave

of calculator users never reach login in the same journey

★ T1 button names the plan

★ T6 save the plan

Login gate

2.7% | 1.4%

reach a login page from the calculator | from fund pages (7,318 | 19,819)

★ P7, P8 bring them back

SIP step (invest)

1,539

reach the SIP step from fund pages (7.8% of login arrivals); 1,132 are charged

★ marks a test or nudge from the roadmap. Login-page changes are not proposed in this round.

Source: NVECTA temporary funnels, 7-day window, steps not strictly ordered; a floor, because www visitors are anonymous until login. Charged counts any successful payment.

Post-login journey: SIP set-up, mandate, retention

Login to purchase

33,975

users start a purchase; 5,125 (15%) reach the SIP step

★ P1 restart a dormant SIP

SIP, payment, OTP

3,402

reach payment, 3,072 OTP; web 91% reach Charged, apps 71-87%

Autopay mandate

1,351

users hit a failure; app failure rate 40-60% vs 24% on web

★ P4 fix my autopay

Running SIP base

2.8M

SIP investors a month; median SIP Rs 1,001, average Rs 2,720; 56% digital

★ P2 raise your SIP

★ P6 add a second SIP

Cancel or pause

2,253

cancelled vs 483 paused; 1,622 left the cancel page without cancelling

★ P5 pause or lower

New folio

28%

of 1,811 new folios make a first SIP within 24 hours; 32% in 7 days

★ P3 start your first SIP

★ marks a personalised nudge from the roadmap; most can run now as NVECTA journeys.

Source: NVECTA saved funnels 3137, 3178, autopay, cancel, pause and folio funnels; transaction_new (all channels) for the SIP base, 14 Sep to 14 Oct 2026. Event-user counts are indicative.

What investors worry about, and what it means for our pages

Signal	Evidence	What it means for us
First drawdown for new investors	Nifty fell 5.3% in one March 2026 week; 486 of 556 schemes were negative in FY26 (as reported); stoppage ratio above 100% in Mar-Apr	Reassurance next to the button (T5)
Small, young SIPs churn most	Under-35s opened 40% of new SIPs in 2025 (Bain, Groww via IBEF); churn is concentrated in newer, smaller accounts	Low entry amounts, mobile-first (T1, T2, T4)
Long-running SIPs are thinning	Accounts older than 5 years fell 11.2% to 1.06 crore (as reported)	Retention nudges: raise, pause, second SIP (P2, P5, P6)
Our own behaviour shows it too	Cancels beat pauses 5 to 1; 40-60% of app mandates fail; 1,622 left the cancel page	Commitment fear and payment friction are real (P4, P5)

Backdrop: record Rs 32,490 crore of SIP inflow in September 2026, yet the stoppage ratio is 78.5% (95.5% in May). Money keeps flowing, but new and small SIPs are fragile. Retail has not left equities; the risk is at the margin.

Source: media reports of AMFI data and surveys (Angel One, Sahi, IBEF, Upstox, Business Standard, DSIJ), 2026; NVECTA behavioural data. Media figures are not independently verified.

Peers put the invest step on the page; we already match on mobile

Page / signal	MOAMC (own)	Axis	ABSL	ICICI Pru	SBI	Nippon
Home: SIP block or button	No SIP block; 'Invest' only	SIP calculator widget	'SIP with ABSL MF' section	'Invest'; expert help	'Invest Now'; no SIP block	'Start a SIP' button
Home: guided start	'Call back', 'WhatsApp us'	'Great for Beginners'	'Get Investment Plan'	'Speak to an expert'	'Talk to us'	'Guide me now'

Green = clear SIP path on the page **Amber** = partial **Red** = not seen on the page **Grey** = neutral

Source: page snapshots, 14 Oct 2026 (desktop and phone viewport, 3 fresh sessions per page). Axis and Nippon SIP landing pages are blocked to scrapers; HDFC was dropped (robots.txt). Snapshots show content, not performance.

Six learnings from how peers handle SIP

Peers end the calculator with a button

ICICI ('Start Investing'), Axis ('Invest Now') and SBI ('Start Now') put a button right under the result. Ours is a sticky 'Start SIP' that does not show the plan. Test T1.

Peers collect contact details early

SBI asks for PAN next to 'Start Now'; Axis offers a call-back form; ABSL offers 'Get Investment Plan'. We ask for nothing until login. Test T6.

Peers answer SIP worries on the page

SBI's calculator page answers 'Can I pause my SIP?', 'Can I modify the amount?' and 'Can I renew?'. Test T5.

Peers show an amount and the minimum

On fund pages Axis, ABSL and ICICI let visitors enter a SIP amount; minimums are Rs 100 to Rs 500. Ours asks for no amount. Test T2.

Peers offer more calculator options

ICICI has amount chips and SIP / lumpsum / SWP tabs, ABSL lists step-up and goal tools, SBI has a Rs 1 crore goal calculator. Test T4.

Most peers are already A/B testing

Axis, ABSL, ICICI and Nippon run Adobe Target; ABSL's home cards and ICICI's hero change between visits. SBI and we show no tool, so we can start ahead of SBI.

Source: page snapshots, 14 Oct 2026 (desktop and mobile). Peer choices show what others do, not what wins; each learning becomes a test.

Test recommendations: five pre-login tests, mocked up

#	Test	Where	Week	Build / run	Expected uplift a month	What we need from the client
T1	Calculator button names the plan	www SIP calculator (mobile first)	1	1 day / 7-14 days	**+60 to 125 SIPs**	Confirm what today's 'Start SIP' passes to the invest site
T2	SIP-first first screen on fund pages	Fund pages, mobile first (Defence Index first)	1	1-2 days / 7-14 days	**+115 to 230 SIPs**	Minimum SIP per fund; how the amount is passed to the invest flow
T5	Reassurance next to the SIP button	Fund pages, mobile first	1	1 day / 14 days	**+45 to 95 SIPs**	Compliance approval of the wording; confirm the pause and stop policy
T4	Calculator: presets, step-up and a clear outcome	www SIP calculator (mobile first)	2	2 days / 14 days	**+40 to 85 SIPs**	Approve default return presets (8-13%) and illustration wording
T6	Save the SIP plan	www SIP calculator (mobile first)	2	2-3 days / 14 days	**+55 to 160 SIPs**	Consent text and approved WhatsApp and email templates

T2 and T5 change the same fund-page first screen, so they run together as an A/B/C. T4 runs after T1 so the effects stack. All five are website changes with a 1-3 day build.

Uplifts are hypotheses sized from this month's volumes; T1, T4 and T5 share the calculator and must not be added. Sample size: about 26k users per arm for the calculator, about 52k for one fund page.

T1 Calculator button names the plan

OBSERVATION

Analytics The SIP calculator is our top page: 267,573 users in 30 days, 99% from paid search and 91% on mobile. Only 2.7% reach a login page.

Competitors ICICI, Axis and SBI end the calculator with a button under the result. Ours is a sticky 'Start SIP' that does not show the plan.

HYPOTHESIS

A button that states the plan ('Start a SIP of Rs 10,000/month'), with 'Start from Rs 100, pause or stop anytime, 100% online' beneath it, raises clicks because visitors see what they are committing to.

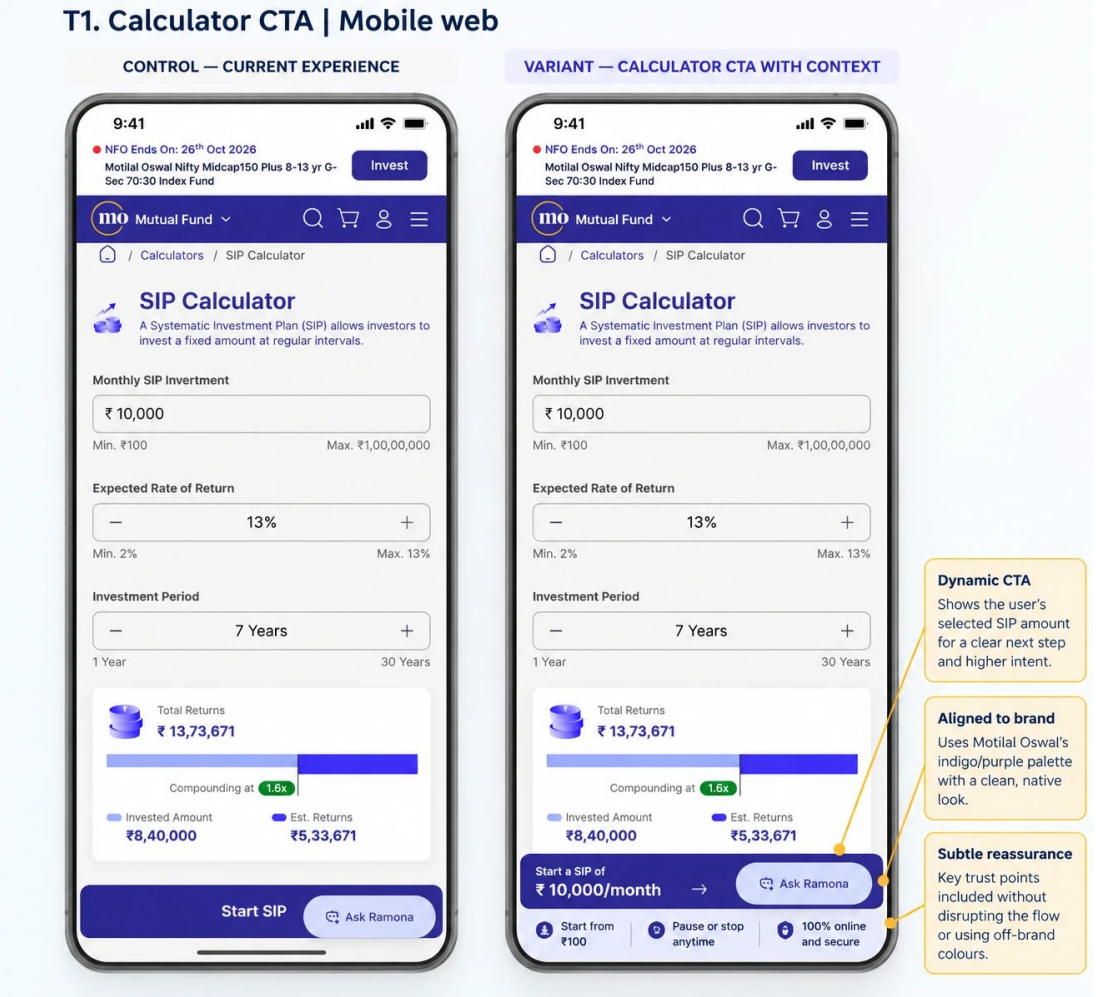

TEST

Control: sticky 'Start SIP'. Variant: dynamic button with the chosen amount plus three trust points. Primary: calculator to login or invest click. Guardrail: calculator use per session.

EXPECTED UPLIFT

+15-30%

relative lift in calculator to login (2.7% to 3.1-3.5%): about +1,100-2,200 login visits and +60-125 SIPs a month

T2 SIP-first first screen on fund pages

OBSERVATION

Analytics Eight fund pages draw 130k-318k views each. Only 1.4% of 1.46M fund-page users reach a login page, and 'Invest Now' asks for no amount.

Competitors Axis, ABSL and ICICI let desktop visitors enter a SIP amount (minimum Rs 100-500). SBI and Nippon show only 'Invest'.

HYPOTHESIS

Choosing a monthly amount on the first screen (Rs 500 / 1,000 / 2,000 / 5,000) makes starting a SIP feel small and concrete, and carries the amount into the invest flow.

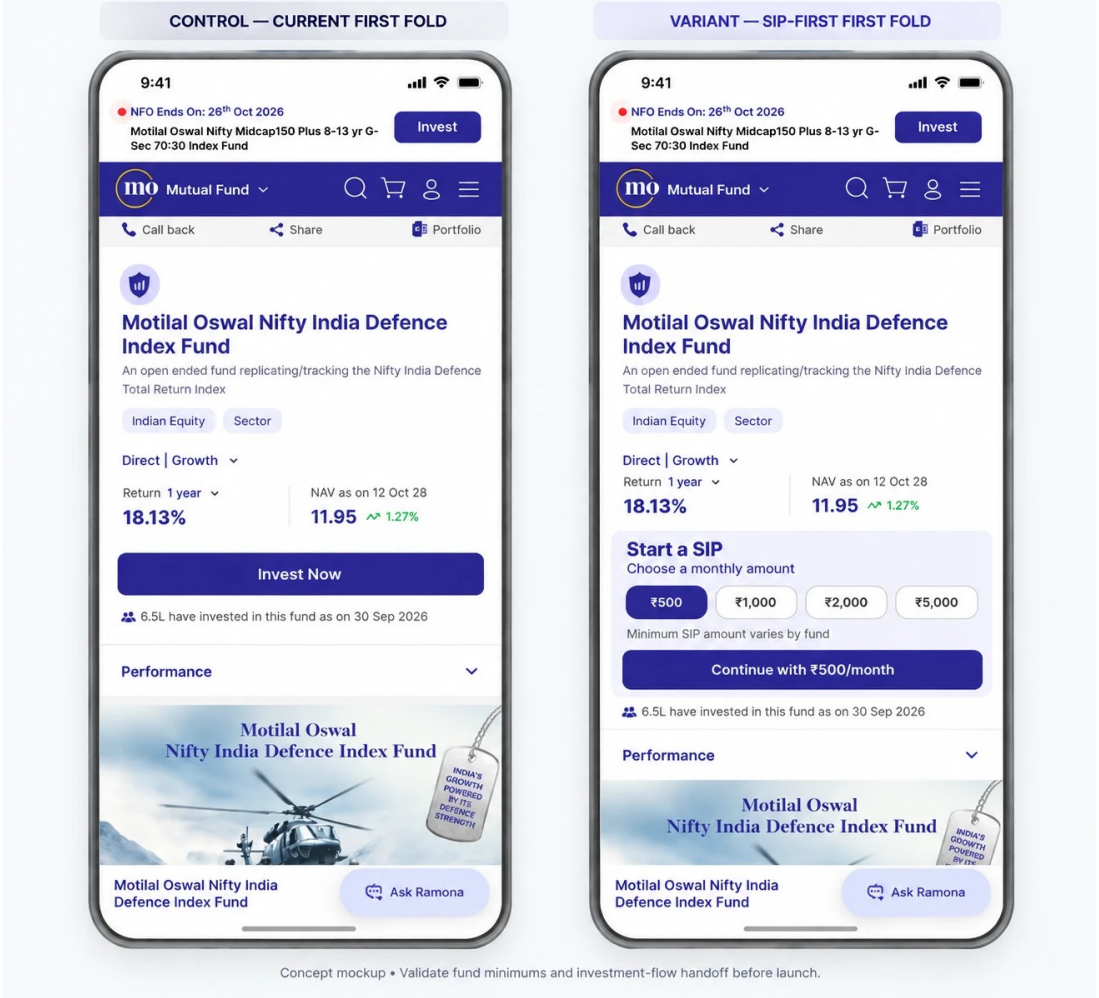

TEST

Control: 'Invest Now'. Variant: 'Start a SIP' block with amount chips and 'Continue with Rs 500/month'. Primary: fund page to login or invest click. Guardrail: lumpsum starts. Check each fund's minimum first.

EXPECTED UPLIFT

+10-20%

relative lift in fund page to login (1.4% to 1.5-1.6%): about +2,000-4,000 login visits and +115-230 SIPs a month across 8 pages

T5 Reassurance next to the SIP button

OBSERVATION

Analytics Cancels outnumber pauses 5 to 1 (2,253 vs 483). The SIP stoppage ratio was above 100% in March and April 2026 and is still 78.5% in September.

Competitors SBI's calculator page answers 'Can I pause my SIP?'. Axis publishes a guide to starting a SIP with Rs 100.

HYPOTHESIS

New investors fear locking in during a volatile market. A strip saying 'Start from Rs 500/month, pause or stop anytime, 100% online and secure' beside a SIP-first button lowers that fear.

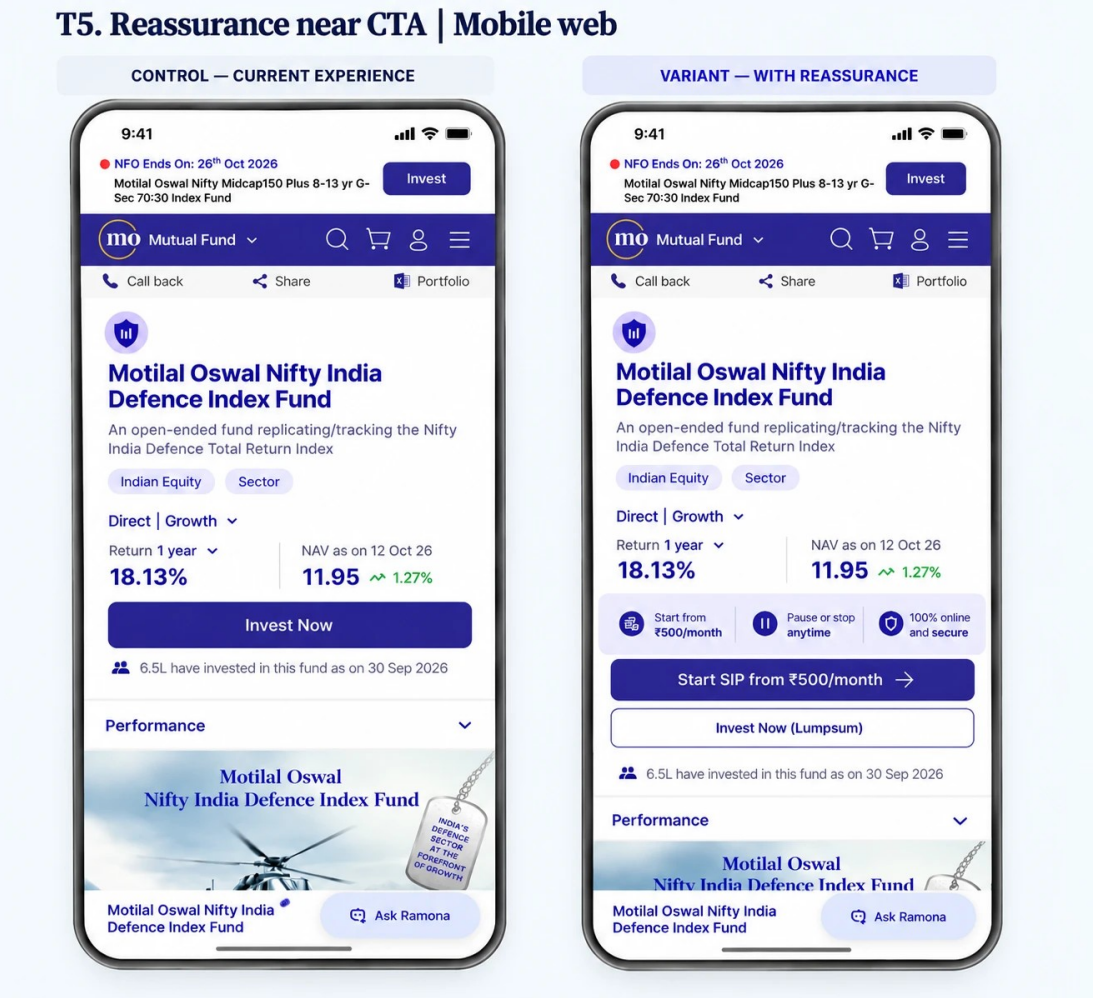

TEST

Control: 'Invest Now'. Variant: trust strip, primary 'Start SIP from Rs 500/month', secondary 'Invest Now (Lumpsum)'. Primary: fund page to login or invest click. Guardrail: lumpsum starts. Runs with T2 as A/B/C.

EXPECTED UPLIFT

+3-6%

relative lift in page to login across calculator and fund pages: about +800-1,600 login visits and +45-95 SIPs a month

T4 Calculator: presets, step-up and a clear outcome

OBSERVATION

Analytics 91% of calculator users are on mobile and type into an open form. Step-up lives on a separate page with 28k views, 8% of the SIP calculator's.

Competitors ICICI has amount chips and SIP / lumpsum / SWP tabs; ABSL lists step-up, cost-of-delay and goal tools; SBI has a Rs 1 crore goal calculator.

HYPOTHESIS

Tap-to-select amount, return and period, an optional step-up switch and a '1.6x your investment' outcome help more visitors complete a plan and see a bigger result, so more reach the button.

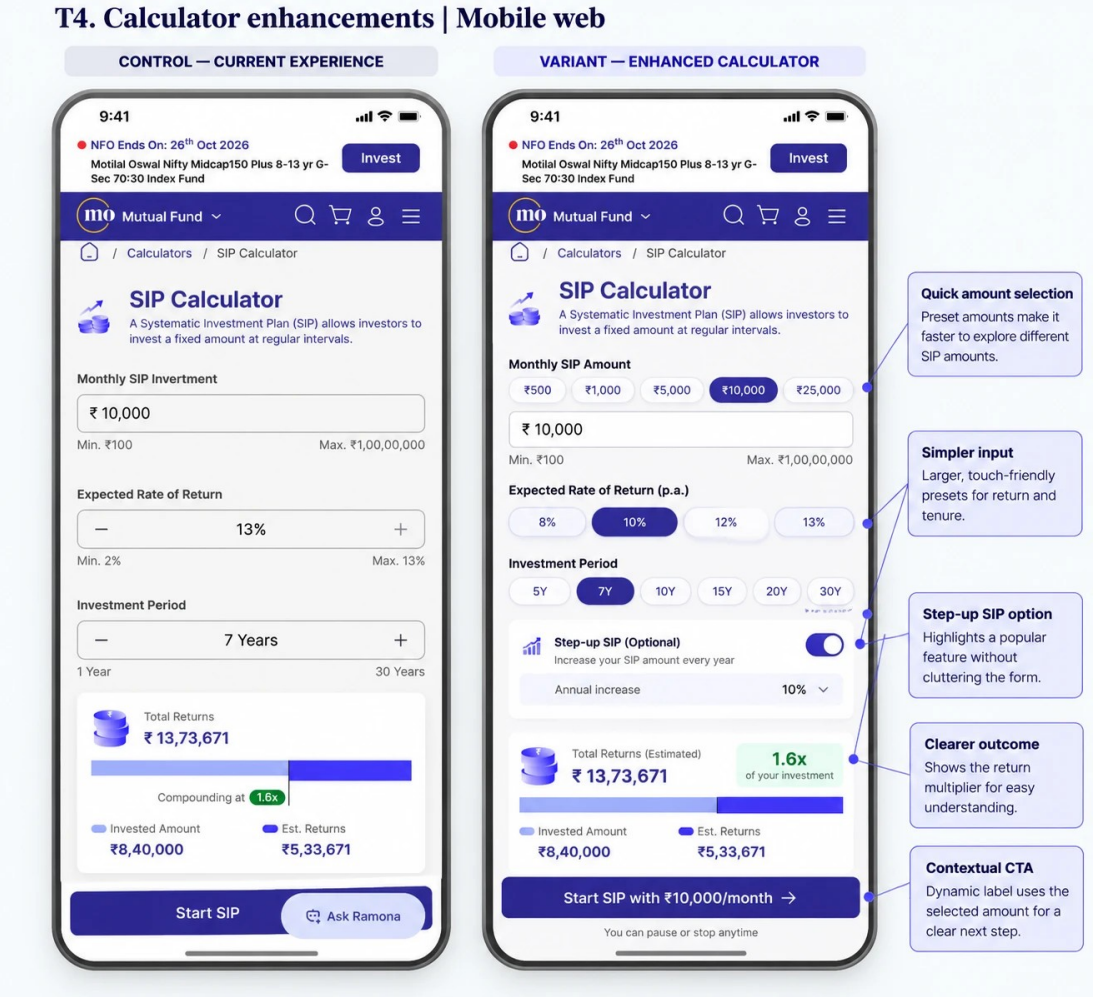

TEST

Control: sliders and open fields. Variant: preset chips, step-up (10% a year), outcome multiple and the dynamic button. Primary: plans completed and button clicks. Run after T1.

EXPECTED UPLIFT

+10-20%

relative lift in calculator to login on top of T1: about +730-1,460 login visits and +40-85 SIPs a month

T6 Save the SIP plan

OBSERVATION

Analytics 267,573 calculator users in 30 days and 97% never reach a login page. We already send WhatsApp (64), RCS (23) and email (145) campaigns a month, so a saved plan can be followed up in NVECTA.

Competitors SBI asks for PAN beside 'Start Now' inside its calculator; Axis offers 'Get a Quick Call'; ABSL offers 'Get Investment Plan'.

HYPOTHESIS

Visitors who built a plan but are not ready to log in will take it with them if offered it by email or WhatsApp. A follow-up journey then brings some of them back to start the SIP.

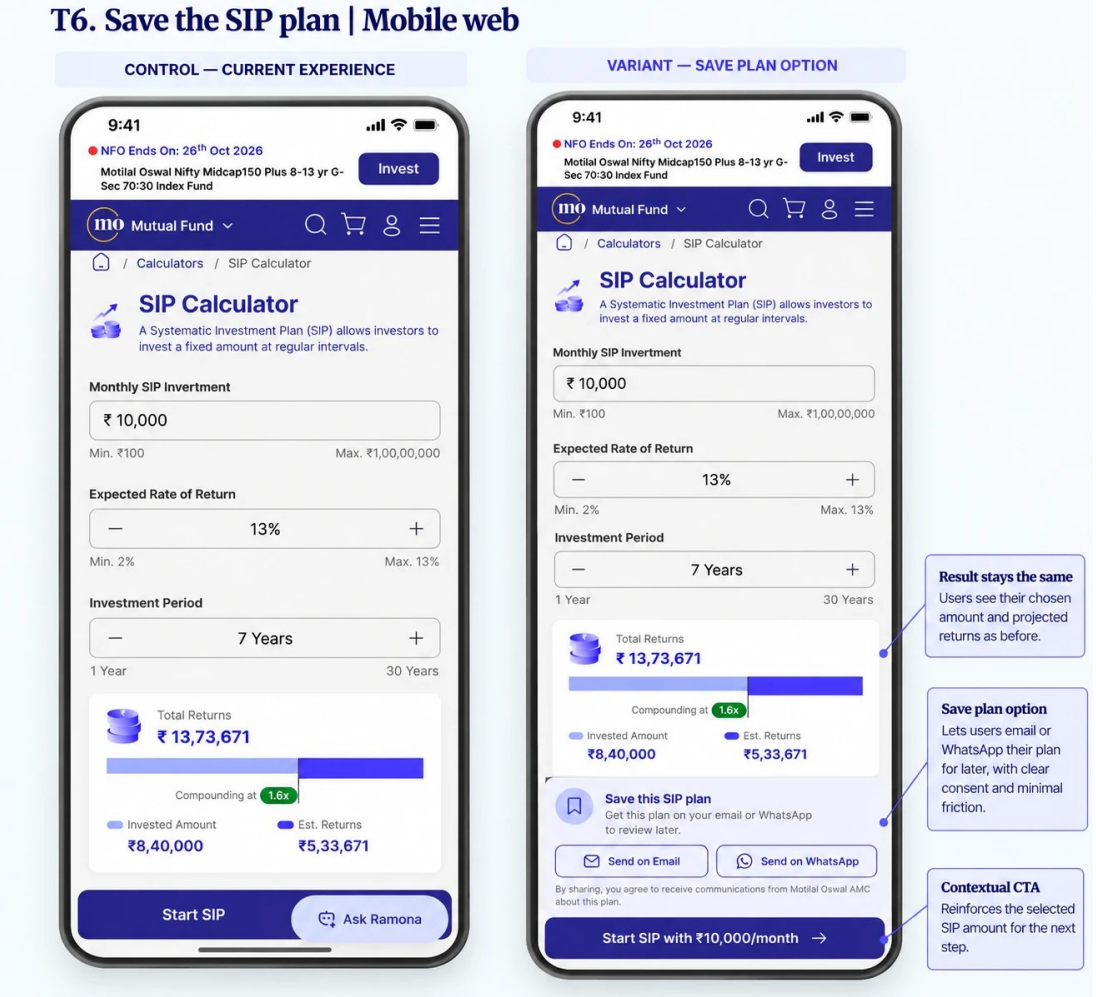

TEST

Control: no capture. Variant: 'Save this SIP plan' with Send on Email / Send on WhatsApp and a consent line; follow-ups at 1 hour, 1 day and 3 days. Primary: capture rate, then SIPs within 14 days.

EXPECTED UPLIFT

1-2%

capture of calculator users (2,700-5,300 leads); if 2-3% start a SIP within 14 days: about +55-160 SIPs a month

Personalisation: the signals we already hold

Explicit

what the investor has told us or we have verified

- Age band (segments for 23-29, 30-39 and 40-50 already exist)
- City and region; Direct or regular channel
- KYC status; preferred channel and consent
- Holdings and AUM band, including holdings at other AMCs (data lake segments)
- Investor zone and scheme on every transaction (56% of SIP investors sit in Digital Sales)

Implicit

what the investor does

- Funds and pages viewed, visit frequency, campaign and keyword that brought them ("Recently Visited Fund" journey already has 489k entries)
- SIP history on every transaction: SIP or lumpsum, amount, scheme (3.97M SIP instalments from 2.8M investors in 30 days; median Rs 1,001)
- Failures and friction: autopay failure, payment failure, cancel-page visit
- Engagement: email opens, WhatsApp reads, RFM tier, market-fall cohort

Source: NVECTA segment list (about 250 segments), journeys and events, Oct 2026. SIP amount and type sit on the transaction_new event; SIP start date and active status do not.

Eight nudges, before and after login, most runnable now

#	Nudge	Audience today (NVECTA)	Signal	Where	What it takes	Uplift a month	Wk
P1	**Restart your SIP**	No transaction in 90+ days: 4.76M (4.58M on WhatsApp). Logged in, idle 30 days: 68k	Implicit: last login, last transaction	Invest home card; WhatsApp or push	Journey now; on-page card needs invest team	**Each 0.1% response = 4,800 restarts**	3
P2	**Raise your SIP**	SIP investors: 2.8M a month, median SIP Rs 1,001; 1.58M in Digital Sales	Implicit: SIP amount, scheme	Debit-day message; invest home card	Journey now (SIP debit journey exists); start date needed for 6+ months	**Each 0.1% response = 2,800 raised SIPs**	4
P3	**Start your first SIP**	New folio, no SIP yet: 1,811 a month	Implicit: folio created	Folio confirmation; message within 1 hour	Journey now; on-page card needs invest team	**+70-145 SIPs**	2
P4	**Fix my autopay**	Autopay or mandate failure: 1,351 users a month	Implicit: failure event	WhatsApp or push within 30 minutes	Journey now (event already received)	**+270-400 mandates**	3
P5	**Pause or lower, don't cancel**	Cancel-page visitors: 1,622. Market-fall cohort: 519k	Implicit: cancel page view; market-fall segment	Message after the visit; cancel step	Message now; 3-option step needs invest team	**+225-340 SIPs kept**	3
P6	**Add a second SIP**	AUM of Rs 1 lakh or more: 42k; one-fund holders	Explicit and implicit: AUM, holdings	Invest home; email	Journey now (AUM and holding segments exist)	**Each 1% response = 420 second SIPs**	4
P7	**Welcome back, start your SIP**	Repeat visitors on www: 31k on one fund page in 7 days, 99% anonymous	Implicit: fund viewed, frequency, campaign	www banner naming the fund viewed	Needs www change; NVECTA web campaign to confirm	**If 1-2% start a SIP: +310-630 on that page**	4
P8	**Finish your SIP**	SIP high-intent users: 265k, only 39k reachable (15%)	Implicit: SIP high-intent segment	WhatsApp, push, email	Journey now	**If 1-2% of the 39k finish: +390-770**	1

P7 is a pre-login banner on www; the rest are messages or on-page cards. Audiences are NVECTA segment counts, Oct 2026. 'Each 0.1%' shows the scale of one response-rate point, not a forecast; the other uplifts assume the stated rate.

What we need from your team to measure and personalise

Need	Why it matters	Used by
Set platform on transaction_new and Charged	Platform is blank on all 2.8M SIP investors, so SIPs cannot be split by website, m-site or app	All tests
Send fund, amount, frequency and step-up with the SIP step events	Lets us read tests by fund and amount and personalise by SIP size	T2, T4, P6
One result event for autopay (bank and UPI) with a failure reason	Gives a true failure rate and a recovery trigger	P4
Carry campaign source from www to the invest site	Credits SIPs to paid search	T1, T2, T6
SIP start date and active or stopped status per investor	Finds SIPs that have run 6+ months and SIPs that lapsed	P2, P5

Evidence: NVECTA event and attribute lookups, Oct 2026. transaction_new already carries SIP or lumpsum, amount, scheme, city and zone.

Next steps: 2-3 tests a week, SIP first

1

Week 1

Launch T1 and the T2/T5 A/B/C; start P8 retargeting; confirm client inputs and the data needs

2

Week 2

Launch T4 and T6; start the P3 first-SIP journey

3

Week 3

Start P1, P4 and P5 journeys; read the week-1 tests

4

Week 4

Start P2, P6 and P7; scale winners; choose problem two for the same cadence

After SIP, the same cadence moves to the next problem: mobile-site conversion (90% of visitors, 8% of purchase starts), new-folio activation, NFO and lumpsum payment failures.

Cadence follows the 1-3 day build time and the commitment of 2-3 tests a week per client.
